EDUCATION

University of Information Technology, Vietnam National University

Bachelor of Computer Science

Ho Chi Minh City

Sep. 2024 – Present

- **Grade:** 9.16/10.0
- **Relevant Coursework:** Artificial Intelligence, Machine Learning, Probability and Statistics, Linear Algebra, Math for Computer Science, Data Structures and Algorithms, Design and Analysis of Algorithms, Object-Oriented Programming, Database Management, Artificial Intelligence Programming.
- **Honors:** Honour for Excellent Academic Achievement and Scholarship in 2 Semesters (Top 6%).

Phan Chau Trinh High School

High School Diploma

Da Nang City

Sep. 2021 – May 2024

- **Grade:** 9.0/10.0
- **Activities and societies:** Member of the Phan Chau Trinh Club of Science and Technology (CST), Phan Chau Trinh's Informatics Olympiad Team.

EXPERIENCE

Undergraduate Research Assistant

University of Information Technology

Nov. 2025 – Present

Ho Chi Minh City

- Conducting advanced **Natural Language Processing (NLP)** research under the supervision of Dr. Dang Van Thin, focusing on core domains including **Transformer-based model fine-tuning**, **LLM fine-tuning via LoRA**, **Multi-agent systems**, and **RAG (Retrieval-Augmented Generation)**.
- Developing autonomous agentic workflows to solve complex NLP tasks, leveraging advanced frameworks to orchestrate collaboration, task delegation, and reasoning between multiple LLM agents.
- Applying Parameter-Efficient Fine-Tuning and RAG pipelines to optimize large language models for domain-specific applications, significantly enhancing context-awareness and inference accuracy.
- Authored, Co-authored, and published research papers in prestigious international **NLP Shared Tasks** (e.g., **SemEval**), achieving competitive rankings in Machine-Generated Text Detection and Hate Speech Classification.

Vice Head of Development Function & Head of AI Team

Google Developer Group on Campus - UIT

Aug. 2025 – Present

Ho Chi Minh City

- Lead the technical roadmap by organizing over 5 specialized knowledge-sharing sessions on **Generative AI** and **AI Agentic workflows**
- Mentor club members in product development, providing technical guidance and strategic ideation that resulted in high-quality projects for **hackathon competitions**.
- Collaborate with the Executive Board to orchestrate core club operations, including end-to-end recruitment processes, large-scale bonding events, and community-building initiatives.
- Facilitate a collaborative environment for developers to experiment with new technologies, bridging the gap between academic theory and practical software engineering.

Member of Development Function

Sep. 2024 – Aug. 2025

- Led a development team at **Google Hackathon Vietnam** to architect and build a **Sign-Language Recognition** application prototype, leveraging machine learning and computer vision techniques.
- Served as a Technical Support Mentor at **Build with AI 2025** (FPT University), troubleshooting technical issues and guiding attendees through Google CodeLabs for practical Generative AI implementations.

TECHNICAL PROJECTS

AskUIT – AI Academic Assistant

LangChain, LangGraph, Qdrant, FastAPI, Groq, LiteLLM

Sep. 2025 – Dec. 2025

- Architected and developed an intelligent chatbot to provide academic support for UIT students, focusing on academic regulations, curricula, and personalized career orientation.
- Won the Encouragement Prize in SEApp 2025.

- Engineered a high-precision **RAG (Retrieval-Augmented Generation)** pipeline using a **Hybrid Search** strategy, combining **Sparse Search (BM25)** and **Dense Search (Vector)** to optimize retrieval accuracy.
- Implemented a **Multi-Agent architecture** using **LangGraph** to handle complex logic, such as cross-referencing course prerequisites and generating tailored major recommendations based on student interests.
- Optimized system performance by integrating **Groq** for ultra-fast LLM inference and **Qdrant** as a high-performance vector database, managed via **LiteLLM** for seamless model abstraction.
- Deployed a scalable backend using **FastAPI** and integrated **FPT Cloud** infrastructure to ensure low-latency responses for concurrent user queries.

Competitive Programming & Algorithm Repository

Aug. 2022 – Present

C++, Data Structures, Algorithms, Codeforces, CSES

- Solved, optimized, and documented over **150+ algorithmic challenges** across prominent competitive programming platforms, including Codeforces, CSES, and LQDOJ.
- Engineered highly optimized solutions using a wide range of Data Structures and Algorithms (DSA), progressing from core techniques (Binary Search, Number Theory) to advanced paradigms such as **Dynamic Programming (DP)**, **Greedy Algorithms**, **Backtracking**, and **Segment Trees**.
- Undertook rigorous algorithmic training to systematically prepare for highly competitive national and regional programming contests.
- Applied advanced problem-solving skills to successfully compete and achieve high rankings in prestigious competitions, including the **Informatics Olympiad in the Central Region and Highlands** and the City-level Youth Informatics Contest.

SCIENTIFIC PUBLICATIONS

Gradient Descenders at SemEval-2026 Task 9: Data-Centric Counterfactual Augmentation for Multi-Label Hate Speech Detection

April. 2026

Tran Phuoc Thanh Nhan, Dang Van Thin

- Conducted comprehensive **Exploratory Data Analysis (EDA)** to uncover severe class and label-pair imbalances, aiming to mitigate **spurious correlations** within the multi-label hate speech dataset.
- Engineered a robust **Data-Centric Counterfactual Augmentation** pipeline, leveraging **LLaMA-4** model and advanced **Prompt Engineering** to synthetically handle underrepresented data distributions, simulating counterfactual scenarios.
- Implemented three targeted semantic generation strategies: Additive Label-Flipping via Attribute Injection, Context Decoupling, and Cross-Domain Identity Substitution.
- Achieved a **44.20% Macro-F1 score** on the official SemEval test set, outperforming the organizational baseline by **+0.14 F1-score** and demonstrating significant improvements across underrepresented categories.

Gradient Descenders at DeSegMa-IT: Leveraging Monolingual Transformer for LLM-Generated Text Detection and Boundary Identification

Feb. 2026

Tran Phuoc Thanh Nhan, Bui Hong Son, Dang Van Thin

- **Achieved Rank #1** in the Machine-Generated Text Detection Subtask (94.58% accuracy) and **Rank #3** in the Boundary Identification Subtask (62.66 MAE) at the **DeSegMa-IT, EVALITA 2026**.
- Developed a robust classification system using **Italian RoBERTa** to effectively distinguish between human-authored and LLM-generated Italian text.
- Engineered a specialized **DeBERTa-based** model for hybrid human-machine text detection, successfully identifying the precise transition point where text shifts from human-written to AI-generated.
- Published research in the proceedings of **EVALITA 2026**, contributing state-of-the-art methods to the field of AI-generated content forensics.

COMPETITIONS & AWARDS

- | | |
|--|-----------|
| • Encouragement Prize , SEApp 2025 | Dec. 2025 |
| • First Prize , Danang's Computer Science Competition | May. 2024 |
| • Third Prize (Bronze Medal) , 5th Informatics Olympiad in the Central Region and Highlands | Mar. 2024 |
| • Third Prize , HueICT Challenge | Mar. 2024 |
| • Fourth Prize , YouthOn Hackathon | Dec. 2024 |
| • First Runner-up , YouthOn Hackathon | Dec. 2023 |
| • First Prize , Innovation for Education Hackathon (IFE) | Dec. 2022 |

TECHNICAL SKILLS

Languages: Python, C/C++, SQL

AI Frameworks & Libraries: Pytorch, HuggingFace, Langchain, LangGraph, Scikit Learn, Numpy, Matplotlib

Backend & MLOps: FastAPI, Qdrant (Vector DB), LiteLLM, Git
